

How can gig economy workers mobilise for their rights?

Investigating strategies from Latino migrant
food-delivery workers in New York City

Research Proposal

Carla Hyenne

January 16th, 2021

Abstract

The goal of this research proposal is to investigate how Latino migrants working in NYC's food delivery industry mobilised to demand their workers' rights, a mobilisation that culminated in the formation of Los Deliveristas Unidos (LDU). I situate the movement within social movement theory, specifically the framework developed by Nichols TODO from which I take three dimensions: the community and network ties between actors, the specialised resources that power the movement, and the institutional and organisational structures that exist in the city that enable LDU to demand workers' rights. The approach I propose is to conduct semi-formal interviews with LDU stakeholders, and to the extent possible, external actors like the local government and police departments. The aspiration of this research is that it can enable other gig economy workers, in other cities and continents, to gain fair employment conditions, social justice, and a right to the city.

Introduction

The gig economy is a recent phenomenon that has emerged in cities world-wide. The appeal of flexibility, the low barrier-to-entry, and weekly remuneration have made it favourable for certain people to take up such work. In New York City, immigrants from Latin America constitute a significant majority of the food delivery workforce (Figueroa et al. 2021). Extensive reporting and research has been done on the poor working conditions of delivery work, which have worsened during the covid 19 pandemic (Fan 2020, McGeehan 2021).

One silver lining for NYC delivery workers has been the formation of the Los Deliveristas Unidos (LDU) movement. Created in March 2020, LDU are a group of thousands of mostly Latino immigrants working for delivery apps, and making demands on their workers' rights. The demands go from "the right to access restaurant bathrooms", to "a minimum wage".

Delivery workers in NYC have been campaigning for their rights since the rise in popularity of food delivery platforms in the early 2010s (**TODO**), but to little avail. Their conditions have seldom improved. However, there has been more progress since 2020. What has changed? On one hand, the pandemic was key in publicly displaying the delivery workers' struggles, especially because they were essential workers. They risked their health and their families' to deliver food to those who could afford to stay home, they did not have access to PPE or basic utilities like bathrooms, and they worked extremely long shifts on less than minimum wage, and they were left without work when restaurants were mandated to close. Moreover, workers are independent contractors. This deprives them from labour protections like minimum wage and worker's compensation, and bans them from unionising (Dunn 2019). The number of delivery workers increased because restaurants had to let employees go. NYC delivery workers went from 50 to 80,000 workers in 2020 (**TODO**). At the same time, crime like theft and personal attacks also increased. 53Although these derogatory conditions existed prior to the pandemic, we can assume that the gravity of the health crisis accelerated the mobilisation of delivery workers.

LDU emerged because of the lack of protection from the system - the digital platforms employing the workers, the government, the court, and the city. It has gained incredible momentum, and a rally in April 2021 attracted thousands of delivery workers (Aponte 2021). The movement was spawned by the Worker's Justice Project (WJP), an NGO that organises immigrant and low-wage workers fighting for better work conditions and social justice. LDU has united with 32BJ, a powerful Service Employees International Union

who passed NYC's 15\$ minimum wage law for fast-food restaurant workers in 2015. In September 2021, following pressure from LDU, the NYC council voted to pass a bill requiring restaurants to provide bathroom access (Gurley 2021).

A report on food delivery workers was conducted by WJP, LDU and Cornell University, and looks at the demographics and everyday experiences of delivery workers: their age, gender, ethnicity, migration background, pay, equipment, and more (Figueroa et al. 2021). It provides insights on the food-delivery ecosystem of NYC, but doesn't analyse the forces that made LDU the success it is.

What is particularly interesting in the case of LDU, is that an important Latino community existed in NYC prior to the delivery worker groups. In NYC, Latinos constitute the largest share of migrants and of undocumented migrants, and resides predominantly in Queens and the Bronx /parencitenycimmigrantpopulation2021. Since Latinos represent a significant majority of food delivery workers in NYC, it is worth investigating how the existence of a Latino community has contributed to the movement's popularity.

In this research, I situate the LDU movement within social movement theory and use this framework to guide the research proposal. It provides a framework to explore what factors have made LDU a success. By success, I mean the extent to which LDU has been able to achieve tangible results regarding working conditions.

I will also draw on the right to the city as a framework to illustrate how the gig economy movements in general are an urban phenomenon and an urban struggle. I will also use rhetoric of undocumented migrant struggles to illustrate the multifaceted nature of food delivery workers in NYC.

Maybe expand on how this research differs from other research;

Research Background and Question

TODO:Find two papers related to urban social movements: eg. Doc Adams, Nichols, Sans Papier, social network papers/theories Research background

Delivery workers' right to the city

The right to the city as articulated by Lefebvre 1995 is interpreted by Don Mitchell 2003 as the right to inhabit public space, to participate in spatial production and to renegotiate the city (Lee 2018). Delivery workers are aware of their significance in the city. As one LDU and WJP member says, “the city keeps saying we’re essential workers, and we want them to act like it and protect us” Ajche n.d. The city here is a metaphor for the system responsible for the delivery economy. It highlights the multi-dimensionality of the movement, involving private companies (digital platforms employing workers and providing the apps), politics (the national and local governments responsible for labour rights), society (those who deliver, and those who are delivered to), spatiality (the use of urban space by delivery workers, in their daily work and in their campaign), policing (the safety of the streets, or lack thereof).

The delivery workers' right to the city is undermined by the system. On one hand, streets are unsafe to use, there is a constant threat of physical assault and electric bike theft, but on the other they are essential for the city. The assaults were particularly problematic on Willis Avenue bridge connecting Manhattan to the Bronx, which is used by delivery workers going home after work. After failed efforts at engaging local police to provide better safety on this bridge, a group of Latino workers took the matter into their own hands. They self-organised a nightwatch, spread the word through Facebook and WhatsApp groups, and put up signs recommending to cross in groups of five or more (Rameswaram 2021, Dzieza 2021). Generally, lockdowns meant less street activity which inevitably reduced the number of “eyes on the streets” (Jacobs 2007) and made delivery workers easy targets. Another concern with the police, is that a significant number of Latinos are undocumented. As a result, bike thefts go unreported, and injuries related to work or assault are not treated (Tuttle 2021, June).

The Deliveristas are fighting to make the streets safer because the system as described is not taking charge. They understand their right to a safe workplace that are the city streets. Through rallies, signs, swag, and their sheer numbers in the city they are making their presence evermore visible and their voices heard.

Delivery workers social movements

Social movements can be analysed in three dimensions: via community and network ties, institutional structures, and specialised resources that contribute to the mobilisation capacity.

Nicholls and ? describe urban social movements as needing 1) a multitude of network relations between many actors and groups, and 2) an institutional structure to work with.

Diverse networks must exist and exhibit both strong and weak ties. Strong ties are useful to create and orchestrate specialised resources, and to build “strong norms, trust, emotions and interpretive frameworks” Nicholls 2008. People forge strong ties when they meet often over a shared interest. This creates an environment where individuals are willing to engage and take risks, and where resources are organised for the group to be efficient, effective and run smoothly. Weak ties are equally as important to connect distinct groups together, and encourage the sharing of specialised resources with broader movements. They create an interdependency between groups and generally strengthen the social movement.

Social groups exist in the Latino population in NYC. This can be seen through the number of hispanic services, shops, and activities like community gardens (Saldivar-Tanaka and Krasny 2004). Social organisations also exist. Perhaps the most relevant are the numerous immigrant organisations like Hispanic Federation ¹, who support those arriving from Latin America.

Although the movement’s primary goals are to gain rights for food delivery workers, it has a ethnic dimension. The movement’s name is in Spanish, all of their resources are available in Spanish, virtually all members are Latino, and some are not proficient in English. There is also a spatial dimension to the Latino communities. They are located predominantly in Queens and the Bronx (of Immigrant Affairs 2021). The element of neighbourhood is important to incorporate to the research, in order to understand whether spatial proximity has strengthened communities which in turn contributed to LDU’s strength.

The LDU movement in turn has created a community. Their Facebook page posts about “sharing culture and faith”, bike and motorcycle repair workshops, and drives to help people in the Latino community obtain an ITIN number (Individual Taxpayer Identification Number) (<https://www.facebook.com/DeliveristasUnidos>).

¹See <https://www.hispanicfederation.org/>

Given the prevalence of food delivery workers in cities today, and their lack of protection from the system, it is worth investigating the opportunities and assets they have to come together and to be heard by those who have regulatory power.

Research question

The research will investigate how have Latino migrants working for NYC's food delivery industry mobilised to demand their workers' rights. The hypothesis is that there exists rich social capital in the Latino community, reinforced by the spatial concentration of the Latino population in select neighbourhoods, and that the existence of these social ties has directly contributed to the creation and the success of the delivery worker movement materialised by LDU.

To address this, I will need to understand what the three dimensions of social movements elaborated above are like for LDU. Again, these are: the presence of strong and weak ties, the alliance structure, and the resources⁷. It would be particularly interesting to research the intersectionality of the Latino community and the delivery workers, and to a lesser extent, the undocumented migrants. Perhaps strong community ties between Latino migrants has powered the mobilisation in a way that could not have been possible otherwise.

The research will address the following three aspects, in no particular order. It is expected that the aspects overlap and provide input to one another.

Communities, neighbourhoods and networks

First is to understand what communities exist in the Latino population. Latinos live predominantly in Queens and the Bronx, so I will investigate whether spatiality has an impact on the communities. I also need to understand the social bonds between Latinos inside and outside their close circles, and what networks exist and the interactions between them, notably with external organisations, for example those that can represent them in court.

I will also investigate how the general population influences or contributes to the movement. Although the food delivery workers movement is not a middle or upper class struggle, the delivery workers support such a lifestyle. Compared to other urban social movements, like homelessness or undocumented migrant struggles, they have the potential to reach and engage a wealthier population whose lifestyle could be impacted by the fate of delivery

workers.

Specialised Resources

Second is to find out what specialised resources emerged from the strong community and network ties. What are the high-quality resources that the city made available to LDU? How did they proliferate, notably through weak ties? It is also useful to consider what resources are made available to delivery workers by their employer. This will shed light on what workers are demanding, to whom, and how.

Institutional structures in the city

Third is to understand what institutional structures exist that enabled LDU. The obvious organisation is the WJP which structures social movements and launched LDU. Others include the 32BJ union which is a structure with political influence; other gig economy movements, like Black and Asian worker movements; and institutional structures like the police force and the local government. What is particularly important to pay attention to is the power relations between the civic organisations, and the political structures. Lack of opportunities to exert agency for workers in the gig economy, because of the power that the platforms exert over them (Anwar and Graham 2020). Also lack of state welfare for the undocumented migrants.

Research methodology

The research will rely extensively on interactions with actors related to the movement like LDU members and organisers, Latino and non-Latino delivery workers, organisations like WJP and 32BJ, admins of Whatsapp and Facebook groups for delivery workers, etc. If possible, speaking with the local police departments and the local government will give an outside perspective to the movement.

The research will be qualitative. I will conduct semi-structured interviews with the different actors. The first point of contact will be LDU, because they have contact details online and will be able to provide further contacts. My connections will be made by recommendation of someone, by someone. Below, I outline the general interview interests by actor, and they

may contribute to answering the research question.

Actors	What knowledge they can bring	What question they help answer
Los Deliveristas Unidos	<ul style="list-style-type: none"> • How was LDU formed? • What is the internal organisation? • Who are the stakeholders? What are their responsibilities? • What relations does LDU have with external organisations/institutions (governments, digital platforms, gig-economy movements, delivery workers, etc.)? 	Specialised Resources; Institutional structures in the city
Members and organisers of Facebook/Whatsapp groups for delivery workers	<ul style="list-style-type: none"> • Why, how and by who were the groups started? • How has LDU changed the groups? Do they exist today? What are the groups' relations to LDU? How are they similar or different in their goals, communications and actions? delivery workers, etc.)? 	Communities, neighbourhoods and networks; Specialised Resources
Self-organised interventions such as the night-watch on Willis Avenue Bridge	<ul style="list-style-type: none"> • Why, how and by who were the groups started? • How has LDU changed the interventions? Do they still take place? How, if at all, are the interventions coordinated with LDU? How are they similar or different in their goals, communications and actions? 	Communities, neighbourhoods and networks; Specialised Resources

Latino food delivery workers	<ul style="list-style-type: none"> • Where they live, how they experience their neighbourhood, what is their community(ies), their background and experience as delivery workers • Are they involved with LDU? If yes, why and how did they get involved, what is their role in LDU. If not, why not, what is preventing them from joining • Are they part of other movements? • Does LDU represent their aspirations? 	Communities, neighbourhoods and networks; Specialised Resources
Non-Latino food delivery workers (eg. Asian, Black, White, etc.)	<ul style="list-style-type: none"> • Where they live, how they experience their neighbourhood, what is their community(ies), their background and experience as delivery workers • Are they involved with LDU? If yes, why and how did they get involved, what is their role in LDU. If not, why not, what is preventing them from joining • Are they part of other movements? • How does the fact that LDU is mostly Latino influence their experience, and the outcome of the movement in their opinion? • Does LDU represent their aspirations? 	Communities, neighbourhoods and networks; Specialised Resources
Local governments and police departments	<ul style="list-style-type: none"> • TODO 	Institutional structures in the city

Table 1: An non-exhaustive list of actors who will be interviewed, what knowledge they will bring, and how that will help answer the research question.

Limits of the Research

The obstacles for the research are the language barrier and the geographical distance from NYC. The Latino community is Spanish speaking and some have limited proficiency in English. Having a limited Spanish proficiency reduces the options of interviewees, which means not being able to access the right people without a translator, and reduces the opportunity to genuinely connect with people.

If the research is conducted from Europe there may be difficulties in meeting and exchanging with the interviewees, especially in a group setting. Video conferencing is a great tool but does not replace real-life interactions. The global health crisis may further complicate travel and planned interviews.

NYC has been chosen as the focus of this research because of the activity already taking place there. However it would be very interesting to carry the research in other social, political and economic contexts like Europe which is itself very diverse.

Lastly, the research will only focus only on LDU, which represents almost only the Latino population of delivery workers. Although other groups like Black and Asian communities work with LDU, and the results of the campaigns affect all delivery workers regardless of their background, these other groups are not the primary focus of the research. This may exclude interesting dimensions of the gig economy movement. Plan of work and Time schedule

Preliminary results / assumptions

Conclusion

Given the prevalence of food delivery workers in cities today, and their lack of protection from the system, it is worth investigating the opportunities and assets they have to come together and to be heard by those who have regulatory power.

The gig economy is an industry that has emerged in cities on all continents, and whose

presence will keep growing for years to come. Unfortunately, gig workers lack protection that ‘conventional’ employees have, such as a minimum wage, worker’s compensation like health care, sick pay and vacation days, and the right to unionise. Their situation is exacerbated from the virtual absence of their employer, tech platforms like Uber Eats or Doordash, who shirk responsibilities by employing workers as independent contractors and who’s algorithms discriminate workers already in precarious situations (Kellogg et al. 2020).

Through this proposed research, I aim to understand how delivery workers in NYC have formed the Los Deliveristas Unidos organisation, which has gained incredible momentum since 2020. I focus on the Latino community, because they make up the greatest share of delivery workers in NYC and are the most represented by the movement. By using three dimensions of the social movement framework of Nichols and TODO, I aim to understand the community and network ties within the Latino community, the specialised resources they mobilised, and the institutional structures within the city that empower LDU to make influential demands. Ultimately, understanding how movements such as LDU can form is important because it can enable other gig economy workers in other cities to claim their right to safety, to social justice and to the streets.
